

## Infosec Learning Labs

The labs' solution is an online, remote accessible laboratory environment giving students a real-world, hands-on experience that provides the necessary skills-set readiness needed to perform entry-level security practitioner support.

Each instructor must create an account with Infosec Learning before students can access and do those labs.

### **To create an account, you need to get in contact with Infosec Learning and choose one of the options:**

- Attend one of the weekly webinars, where you will get your demo account credentials:  
<https://attendee.gotowebinar.com/rt/4203243129520871426>
- Contact **Jennifer Yanko**, Senior Account Manager, at [860-494-8686](tel:860-494-8686) |  
[jyanko@infoseclearning.com](mailto:jyanko@infoseclearning.com). she can schedule a meeting with you and help you set up your account and answer any questions
- Make sure to mention that the labs are already integrated into your Canvas course.

## Share Access Code with your Students

For students to access Infosec Learning Labs, they need individual access codes. Currently, the STEM division uses a grant to purchase those access codes directly from Infosec Learning and distribute them to students.

Once you are assigned to teach this course, make sure to contact:

### **Faisal Aljamal: Assistant Professor | Coordinator, Cybersecurity**

- Email [faljamal@hccc.edu](mailto:faljamal@hccc.edu)
- Phone 201-360-4746
- Office STEM Building, Room 405-A

**Professor Faisal is the liaison between Infosec Learning and HCCC instructors. He will assist you and provide you with your student's access code.**
